BRAVO 11 USE CASE BASEBALL CARD

Help us render and visualize the CJADC2 app store.

“What was your program again? That sounds a lot like XXX”

Me: I’m building the PACAF Sandbox. Focused on Operational to Tactical integration my whole career. I’ve launched off aircraft carriers in an F/A-18 and an improvised runway in an F-22.

Problem: No one has a fully informed conceptual model of all of the “good ideas” trying to help solve “CJADC2”. Siloed efforts mean most people see only a small fraction of the possible solutions currently in work.

Data available: 169 examples to model = apps and technology partners contributing to a complex ecosystem

Idea: An onboarding website to collect and information about solutions. Then rendered as a 3D constellation of interconnected systems of systems.

Why: We can finally figure out what everyone is doing.

Who can help? Graphic and web designers, marketers, OSI model experts, conceptual model experts, project managers
